

SanerNow Asset Management

SanerNow – Your ‘OS’ for managing and securing endpoints

Today’s Reality

- Without appropriate asset tracking, companies continue to pay for unused software
- Companies lack visibility into all installed applications, whether used or not
- Infrastructure resources are being consumed by inappropriate software assets

The Challenge

Due to the inability to track assets, companies cannot efficiently allocate existing resources. They rely on costly manual fulfillment methods and asset inventories. They may not know what assets are available to them, and resources might be spent unnecessarily.

Overspending on software licenses is a common problem. Assets can easily be underutilized, and software licenses might be over purchased.

The Solution

SanerNow Asset Management (AM) is a cloud-delivered service that tracks assets installed on hosts, the open vulnerabilities in the OS and applications, their patch or update levels, and prioritizes remediation tasks - all critical to the deep visibility required to prevent attacks and data breaches.

Key Benefits

- ✓ **Maximize the value of IT assets**
 - Helps optimize cost and reallocates underutilized assets
 - Reduces downtime of individual assets through intentional evaluation, maintenance and planning
- ✓ **Increase compliance**
 - Monitors software license compliance and security regulation
 - Plans your software licensing needs and assists in avoiding fines and penalties that could be incurred during a software audit
- ✓ **Deliver value by reducing risks and costs**
 - Minimizes wasted resources by identifying and removing underutilized assets
 - Provides visibility and control of IT assets, enforces asset policies and regulatory requirements
 - Improves efficiency and quality of services
 - Reduces risk by having central access to asset’s health and potential failure information
 - Cuts costs by consolidating information on how the IT budget is invested, how it is performing, and how this relates to current use and future expenditures

SanerNow Asset Management

Key Features & Capabilities

- ✔ Track software and hardware IT assets
- ✔ Track changes, configurations, new installations
- ✔ Blacklist Rogue applications
- ✔ Identify and reclaim license investment on rarely used applications to control IT costs
- ✔ License management – Help avoid unnecessary purchases and overspending on software licenses
- ✔ Holistically manage your software assets and improve productivity around license reporting and audit management

Bring Saneness to your endpoint security and systems management with SanerNow, a SaaS-based solution.

Saner Now – one platform, multiple use cases, one solution. Simplify IT security and management. Reduce costs.
